
EAGLE REX

The Buddy System

Back up Digital communicators at a much lower low cost!

Rex, The Buddy System, utilizes the same time proven phone line monitoring circuitry as the Eagle Model 1300 Telephone Line Fault Monitor but in addition, provides an intelligent output to activate an RF short range transmitter (which have ranges up to a mile) whenever a line fault is detected **AND** the burglar system has detected an alarm. Once activated, the RF transmitter will send a signal to a neighboring home or business where you have installed a matching RF Receiver and digital communicator (or perhaps they already have an alarm system with a communicator.) This equipment will then dial out utilizing the neighbors secure phone line and report the Line Fault + Alarm condition. Rex, The Buddy System, does not initiate communications without both a line fault **AND** an alarm condition. You can now offer your customers back up communications and get a foot in the door, next door! Ideal for residential as well as commercial applications.

In addition to the Fault + Alarm relay output Rex, The Buddy System, features a separate relay output for the line fault condition only, allowing you to initiate an audible supervisory signal inside the protected location, alerting the system user to the potentially dangerous condition.

FEATURES

- ◆ Line fault detection plus Alarm
- ◆ Two relay outputs
- ◆ Status LED
- ◆ Low current draw in standby

APPLICATIONS

- ◆ Neighboring homes and businesses
- ◆ Apartments
- ◆ Strip plazas
- ◆ Malls
- ◆ Office buildings
- ◆ Medical centers

SPECIFICATIONS

Dimensions: 3.00" x 4.10" x 1"

Power; Voltage: 12VDC

Current (Standby/Active): TBD mA/ TBD mA

ORDERING INFORMATION

P/N: 301302 Rex Buddy System
